

QUICK START GUIDE

Setting up your WCM2 System

1. Connect your WCM2 to your DNP printer with the provided USB printer cable. There are two available USB ports, making it easy to connect two DNP printers!
2. Connect the power adapter to the WCM2. If you are using a QW410 printer, the alternate USB power cable can be connected to the USB port in the back of the printer.
3. The WCM2 requires 60–90 seconds to power up and will print a test page when ready.
4. Once the WCM2 has printed the test page, it will broadcast a hotspot so you can connect your mobile, PC, or MAC device (see image to the right).
 - In the Wi-Fi settings of your device, look for and select **DNPWCM-xxx**. (The last 3 digits are unique to your WCM2.)
 - The default password for the hotspot is **dnp12345**

NOTE:

Both the name and password for the hotspot can be changed in Network Settings.

5. With your device connected to the hotspot you will be able to print pictures from your device. Use any photo app to view your picture.
6. Press the **Share** icon (iOS) or the **Menu** icon (Android).

NOTE:

If you are using cloud storage for your pictures the WCM2 must be connected to the internet using either Wi-Fi or Ethernet for access to the pictures.

7. Scroll through the list and select **Print**. Select the **Printer** and **Print Size** you want (see images to the right). Standard print sizes are available by default. Additional print sizes can be made available in the printer settings menu.
8. Press **Print**.
