

## WCM Plus Software Update v.5.1.0

**How to update:** To determine if an update is available for your Wireless Connect Module, connect the WCM Plus to the internet using the following steps:

- Connect your iOS, Android, Laptop, or PC to the WCM Hotspot:
  - **WCMPLUS-xxx** – the last three digits are unique to each WCM Plus
- Enter **192.168.4.1** in the address bar to open the WCM portal in a web browser.
- Connect the WCM-Plus device to the internet either by connecting an Ethernet connection or by connecting to a local Wi-Fi network.
  - An Ethernet connection usually increases download speeds.
  - To connect to a local Wi-Fi network, go to Network Settings / Wi-Fi Connection in the WCM-Plus portal and enter the network SSID and password.

Update your WCM-Plus using the following steps:

- A notification will appear in the main menu indicating that an update is available.
  - This may take a short while as it checks the update server.
- Select **Software Version** to check the current version of software and, if an update is available, the latest version will also be shown.
- Tap **Update** to install the update. A notification will popup asking for confirmation of the upgrade process and a warning to allow several minutes for the update to complete. Once the process is complete a test page will print indicating the process is complete.

*Note, Factory Reset will roll back to the version installed at the factory. The update process will install all the latest changes.*

If you have any questions, please contact DNP Support or your DNP photo product reseller.
